Project Overview Report

This document provides a short overview of an internal software project. Its purpose is to demonstrate document-based question answering using a RAG pipeline.

Scope

The project focuses on building a PDF-based assistant capable of answering questions using only the information contained within the uploaded documents.

Key Objectives

- Enable reliable document retrieval
- Prevent hallucinations
- Support conversational memory
- Remain cost-efficient and simple

Intended Audience

This report is intended for developers, reviewers, and recruiters evaluating modern LLM-based applications.
